TL-A320

2 MORE FRONT LOADING TOWERLIFTS FOR 2008 !

SPECIFICALLY DESIGNED FOR LIFTING LINE ARRAY

With conventional towerlifts, the maximum load is rapidly reduced the further away from the profile the load is placed. A capacity of 300kg, is reduced to 190kg at 50cm from the towerlift.

The TL-A320 can lift 320kg with the centre of gravity situated at 50cm from the towerlift profile. This means that the front of the Line Array can be at 1 metre from the towerlift.

The NEW TL-A320 and TL-A240 allows the Line Array to be situated at a distance from the lift so as to achieve the required inclination of the cabinets and ensure perfect coverage.

The TL-A320 and TL-A240 are designed to offer unprecedented front and lateral stability, guaranteeing fixed and safe positioning of the Line Array. The rear support bars as well as the frontal support affirm this towerlifts stability.

SPECIFICATIONS

Maximum height	6m
Maximum load	240kg (at 0,5 m advanced)
Security	ALS
Work surface	2.25 x 2.15m
Folded height	1.98m
Weight	120kg
Winch	1200kg
Load support	Forks
